SOVENTIX GMBH

PRESS RELEASE / POSTING

Soventix is widening its footprint on the African Continent

Wesel, November 18, 2022: Soventix is widening its footprint on the African Continent.

With the recent acquisition of a farm in Stellenbosch, South Africa, Soventix will showcase its Agrivoltaic sample projects. This technology should mitigate some of the major climate threats affecting Africa's water, food and energy shortages. Agri-PV developments are most prevalent in Europe and Germany; however, the positive impact of this technology will be significant in the high arid and high radiation regions of Africa. Not only will it produce energy in agricultural areas, it will subsequently improve farming productivity. Soventix will investigate whether Agri-solar installations can change a desert landscape into a productive agricultural land.

European support of solar PV deployment in Africa is necessary. As Soventix has been active in Africa for 12 years, this development is entrenched in the DNA of the company.

With the acquisition of the farm, this project has commenced and the Soventix South African HQ has recently moved to the farm.

As this is as an exciting development, we shall keep our audience and the public informed on the latest news and developments.
