PRESS RELEASE / POSTING

Agri-Solar. The advantages are obvious, or rather on the field.

Wesel, December 16, 2022: Agri-Solar. The advantages are obvious, or rather on the field.

Long dry summers are increasingly affecting our agriculture and increasing the costs of shading and irrigation, for example in fruit growing.

At the same time, in a densely populated country like Germany, there is a lack of land for the expansion of renewable energies.

With the key technology Agri-Photovoltaics these two increasing problems of our time are solved in combination. Modern agri-photovoltaic systems combine resource-saving agriculture with sustainable energy generation.

With an investment in this technology you promote another field in the field of renewable energies and contribute to climate protection.

Soventix successfully plans and constructs Agri-Solar plants worldwide, which are adapted to the respective situation in the countries.
